

IOF Trade Journal

"WTF Are You Doing?!" — Automated Accountability Partner for IOF Traders
Build: 2026-06-03 · TradePhantoms IOF v2 · Quantower Indicator · Phase 1 Complete

What Is This?

The IOF Trade Journal is a Quantower indicator that runs silently alongside your IOF v2 indicator. It acts as a real-time accountability partner — capturing every trade you take with full IOF zone context, entry quality grade (A through F), and environment state, then writing structured logs to your machine automatically.

No TradeZella subscription. No Rithmic API fees. No manual CSV uploads. Zero friction. Every trade journaled the second it closes.

"WTF Are You Doing?!" — The Name Is The Feature

When you enter a trade outside an IOF zone (Grade F) or inside a zone with zero confluence (Grade D), a pop-up alert fires the moment the fill happens:

WTF Are You Doing?! Grade F — No IOF zone nearby. Are you chasing?!

This is the accountability partner moment — before the trade settles, before emotion kicks in, you see your grade. A setups feel earned. F setups feel like what they are. That feedback loop is the entire product.

How It Works

- Hooks into Quantower position feed via `Core.Instance.PositionAdded / PositionRemoved` events
- At every position open: captures entry price, contracts, direction, time, session — then queries `IOFZoneRegistry` (via reflection) for the nearest zone at that exact price
- Computes A-F entry grade based on zone proximity and confluence factors (Departure, Absorption, MTFC, HVN)
- At position close: back-calculates exit price from gross P&L; computes net P&L; after commission
- Writes a CSV row and full JSON array update in real time as each trade closes
- Generates a dark-theme HTML dashboard at 4:00 PM ET or when the indicator closes
- Renders grade and R-multiple labels on the chart at entry and exit price levels
- Zero external API calls — all data lives on your machine only

Entry Quality Grade (A / B / C / D / F)

Every trade is graded automatically at the moment the position opens:

A Inside zone + MTFC + HVN + D $\geq$ 2x + ABS $\geq$ 2x

All 4 confluence factors — your best setup

B Inside zone + any 2 confluence factors

Solid — two out of four, take it with conviction

C Inside zone + any 1 confluence factor

Acceptable — one factor is better than none

D Inside zone, zero confluence factors

Caution — zone is there but nothing confirms it. Alert fires.

F Entry outside zone entirely

You chased. WTF alert fires immediately. Review this trade.

Data Captured Per Trade (45 Fields)

Every completed trade writes one row to CSV and updates the JSON array:

Category	Fields Logged
Identity	TradeId, Date, EntryTime, ExitTime, HoldTimeSeconds, HoldTimeFormatted, Session
Execution	Symbol, Direction, Contracts, EntryPrice, ExitPrice, GrossPnL, Commission, NetPnL, ExitReason, RMultiple
Zone Context	NearestZoneType, ZoneTop/Bottom, ZoneScore/21, EntryInsideZone, EntryDistanceTicks, DepartureMultiplier, AbsorptionMultiplier
Environment	HtfTrend, ItfTrend, TradeWithTrend, NearestHtfZoneDist, BarAtr20, TimeOfDayBucket
Exit Analysis	HitTp1/2/3, EarlyExit, StopMoved, MaxAdverseExcursion, MaxFavorableExcursion
Grade	EntryGrade — A / B / C / D / F

Output Files

File	Path	Description
CSV Log	...\IOF_Journal\trades_YYYY-MM-DD.csv	One row per trade. Opens in Excel/Google Sheets. Real-time append.
JSON Log	...\IOF_Journal\trades_YYYY-MM-DD.json	Full array rewritten after each trade. Machine-readable.
HTML Dashboard	...\IOF_Journal\dashboard_YYYY-MM-DD.html	Generated at 4 PM ET. Dark-theme stats page.

Daily HTML Dashboard

- Day summary: total trades, win rate, net P&L, profit factor, avg win/loss, avg hold time
- Grade distribution: count and win rate per grade — proves grade quality correlates with results
- Win rate by zone type: RBR vs DBR vs DBD vs RBD — which pattern performs best for you
- Win rate by session: NY Open vs NY Mid vs NY Close vs London
- Full trade log table with grade, zone, session, hold time, R-multiple per trade
- MAE/MFE analysis added in Phase 3: how far against you before turning; profits left on table

Indicator Parameters

Parameter	Default	Description
Log Directory	C:\Quantower\Logs\IOF_Journal	Where CSV / JSON / HTML files are written

Parameter	Default	Description
IOF Timeframe	5	Match to your IOF v2 chart timeframe period
Zone Proximity Ticks	8	Tick range that counts as inside zone for grading
Commission Per RT	\$0.90	Round-trip commission per contract (MNQ default)
Enable CSV Log	true	Write CSV in real time
Enable JSON Log	true	Write JSON in real time
Enable HTML Dashboard	true	Generate daily HTML at 4 PM ET
Show Overlay Labels	true	Grade + R labels on chart at entry / exit
Alert on Grade D/F	true	"WTF Are You Doing?!" pop-up on D or F entry

Installation

- Unzip IOF_TradeJournal_FULL_INDICATOR_2026-06-03.zip to:
C:/Quantower/Settings/Scripts/Indicators/
- Restart Quantower or click "Reload Scripts" in Settings
- Add "WTF Are You Doing?! - IOF Journal" to any chart on the same symbol as IOF v2
- Set IOF Timeframe to match your IOF v2 chart timeframe (default: 5)
- Indicator is silent — no visible panel. Grade labels appear on chart at entry and exit.
- First trade auto-creates the log directory and starts writing files immediately.

Build Phases

Phase	Status	Scope
Phase 1	COMPLETE	Position feed, CSV + JSON logging, execution data, file I/O, session detection, IOFZoneRegistry zone lookup via reflect
Phase 2	NEXT	Full zone metrics (DepartureMultiplier, AbsorptionMultiplier, MtfcBonus, HvnConfluence) from ZoneMetricsRegistry — co
Phase 3	PLANNED	HTF/ITF trend at entry, ATR context, MAE/MFE tick-by-tick tracking, stop movement detection, TP hit detection
Phase 4	PLANNED	Enhanced analytics: win rate by D:x/ABS:x threshold, MTFC vs non-MTFC, HVN vs non-HVN, zone freshness, Google S

IOF Journal vs TradeZella

Feature	TradeZella	IOF Journal
Trade import	Manual CSV upload	Automatic — live position feed
Zone context	None	Full IOF zone data at entry
Setup grading	Manual tag	Automatic A-F grade
IOF-specific stats	None	Win rate by zone type, D:x, ABS:x, MTFC
Monthly cost	\$49/month	Free — built into your indicator

Data ownership	Their servers	Your machine only
WTF accountability	None	"WTF Are You Doing?!" alert on D/F entry
Rithmic API needed	No	No
Auto-sync	No (manual upload)	Real-time on every close

Built 2026-06-03 for TradePhantoms IOF v2. All data stays on your machine. No external API calls. The "WTF Are You Doing?!" alert is the product — one honest moment before a bad trade becomes a bad habit.
